

The global address for industrial cleaning technology, automation and filtration: www.durr-ecoclean.com

In keeping with our new corporate appearance, our website has also been relaunched.

At www.durr-ecoclean.com you can now reach all members of the Dürr Ecoclean Group – including the brands Henry Filters and H.R. Black, representing the filtration technology field.

The website not only offers detailed information on products for industrial parts cleaning, automation and cooling lubricant preparation – it is also a comprehensive source of know-how and general knowledge on the various topics. So www.durr-ecoclean.com is definitely worth a visit, and also useful as a reference information site.

You can also subscribe to a digital newsletter on the homepage.

Dürr Ecoclean 2006 – The year of strategic realignment

Hello,

2006 is set to be the year of strategic realignment for the Dürr Ecoclean Group. Our aim with this new structure is to become an even more innovative, efficient and powerful partner for our customers throughout the world.

While the restructuring will certainly bring many changes, one thing will remain – your regional contacts will still be there for you in future. But with the new alignment of Sales and Service to uniform global standards, your trusted Dürr Ecoclean staff members will now also be able to offer you significant added value. With the new Dürr Ecoclean network they will have access to the know how, experience and resources of all the various companies within the Group. So you will benefit directly from increased consulting and development capacity, greater testing and investigation opportunities – all linked to improved service and support.

Within the scope of the realignment, the firms Dürr Ecoclean, Stic Hafroy, Ingenieria Agullo and Dürr Automation that operate in the fields of industrial cleaning technology and automation will be united under the Dürr Ecoclean brand. It is certainly with a tear in our eye that we say goodbye to the brands Ingenieria Agullo and Stic Hafroy on 1 January 2006, as these brands have proud 40 and 70 year histories respectively. It was a difficult decision, but ultimately we felt that providing our customers at all locations across the globe with leading technology under a single brand was the key goal.

We thank you for your continued trust in us and wish you a very successful year in 2006.

Best regards
Dürr Ecoclean GmbH

Customer Orientation and innovation in focus

Global networking to strengthen local facilities

The Dürr Ecoclean Group, leading supplier in the fields of industrial cleaning technology, automation and filtration, is set to bring together all its global companies under the umbrella brand of Dürr Ecoclean on 1 January 2006. This branding is part of a long-term globalization strategy, targeting greater customer orientation, innovation and growth.

Based in Germany, Dürr Ecoclean has developed into a worldwide group over the last 20 years. Its companies in France, Spain, the Czech Republic, Germany, the US, India and China develop and market cleaning, automation and filtration units that are used across the globe by auto manufacturers, their suppliers and on the general market. To date, these products have been marketed under various brands, including Stic Hafroy, Ingenieria Agullo and Dürr Automation.

Stic Hafroy was founded in 1932 as a company for treating the insides of boilers. Then in 1944 the company based in Loue, France started to develop water-based parts cleaning units for cold cleaning of mechanical parts, selling its first unit in 1946.

The field of automation/conveyor technology was added in 1981, and in 1990 the company joined the Dürr Group. Stic Hafroy has been a part of Dürr Ecoclean GmbH since its foundation in 1996.

The Barcelona-based Ingenieria Agullo can also look back on many years of successful business. Founded in 1965, the company developed the first cleaning unit with a continuous chain conveyor. Then in 1969, it launched a transfer unit that made it possible to clean several parts at the same time. Five years later the "big wheel technology" was introduced. Alongside transfer units, this technology was also used for brush deburring units. Ingenieria Agullo built its first high pressure deburring system in 1979. With the introduction of the planetary deburring head and robot gantries, the company set further standards in the field of high pressure deburring technology in the years that followed. Ingenieria Agullo became a member of the Dürr Ecoclean Group in 1996.

Dürr Automation in Wixom (USA) began development and construction of automatic conveyor units in 1985 under the umbrella of Dürr Industries. Following its sale in 1988, the company produced gantries and units for industrial parts cleaning. In 1994 it was then reintegrated into Dürr Industries and now produces portal and transfer systems for coating technology. The merger of Dürr Conveyors with Dürr Industries in 1997 led to Dürr Automation becoming part of the Ecoclean Group in 1998.

From 1 January 2006, the companies operating in the fields of industrial cleaning technology and automation will finally be united and trade under the name of Dürr Ecoclean.

Filtration technology will remain within the Group with the brands of Henry Filters and H.R. Black. The filtration technology products will be manufactured at Dürr Ecoclean Inc.'s site in Bowling Green, USA.

The reorganization of the companies within the Group will be accompanied by a common global alignment of Sales and Service. Regional contacts and existing customer relations remain intact, while worldwide capacities in Sales and Service gain uniform standards. Customers of the Dürr Ecoclean Group thereby gain added value – ranging from consulting, through project planning, testing and investigations, right through to service and support - as every site can now access the know how, experience and resources of the other sites.

As the Dürr Ecoclean Group offers many varied and comprehensive services, the various sites will concentrate on certain technologies. This again improves the product received by the customer, preventing overlaps in development and allowing work being performed in parallel to merge under uniform standards. This bundling of development capacities to form a global network brings innovations which offer our customers a competitive advantage, making them faster and more economical.

Ultimately, the realignment also allows the Group to better meet the needs of modern globalized markets. It is no longer enough to simply supply customers throughout the world.

To secure the future of the company and its people, it is necessary to follow customers and markets, know and meet regional requirements and build up local service and support competence. It is also vital to ensure that the high technology and support standards of the Dürr Ecoclean Group are met in all locations.

All of these steps have one common aim: To offer all customers in all locations throughout the world the optimum solution for their specific task, guaranteeing the highest quality across all production sites.
